RULLINU.						

Total No. of Pages : 01

Total No. of Questions : 08

M.Sc. (BT) (2018 Onwards Batch) (Sem.–1) BIOMOLECULES AND METABOLISM Subject Code : MBT-101 M.Code : 75659

Time : 2 Hrs.

Max. Marks : 35

INSTRUCTIONS TO CANDIDATES :

- 1. Attempt any FIVE question(s), each question carries 7 marks.
- 1. Describe the Watson and Crick model of DNA. Explain the characteristics which make DNA ideal hereditary molecule.
- 2. Define and distinguish between tertiary and quaternary structures of proteins.
- 3. Give an overview of techniques of protein purification.
- 4. Deduce the Michelis-Menton equation for determination of enzyme kinetics.
- 5. Give the labelled diagram of generalized tRNA molecule and show the binding sites for amino acids and messenger RNA.

Give structures of at least three important phospholipids based on phosphatidic acids.

- 6.
- What is glycogenesis? Give the steps leading to the synthesis of glycogen and explain the 7. role of cyclic AMP.

Describe the citric acid cycle with well illustrated diagram.

8.

<u>Note</u>: Any student found attempting answer sheet from any other person(s), using incriminating material or involved in any wrong activity reported by evaluator shall be treated under UMC provisions.

Student found sharing the question paper(s)/answer sheet on digital media or with any other person or any organization/institution shall also be treated under UMC.

Any student found making any change/addition/modification in contents of scanned copy of answer sheet and original answer sheet, shall be covered under UMC provisions.
